

Biosecurity Support for Livestock

from prevention to decontamination, safety is our #1 priority

Why hire a highly-trained team for Avian Influenza?

A well coordinate response to a confirmed case of H5N1 Avian Influenza (HPAI) is imperative. This virus can spread quickly through manure, personnel, clothing, equipment, and nasal & eye secretions. But when properly disinfected, clients have been able to prevent the spread - saving them time and money, while keeping health and safety the priority.

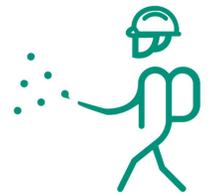

When you work with Miller Environmental Group (MEG), you're hiring a team of professionals including environmental managers, compliance specialists, and emergency responders with hazardous material experience.

MEG personnel have been trained specifically to disinfect spaces in the most effective and safe manner possible. Team members are equipped with OSHA approved PPE and only use CDC, EPA and WHO approved disinfectants to get the job done, ensuring a safe return to the classroom or office.

Solutions are customized based on individual needs and circumstances, including:

- Personnel, Facility & Equipment Sanitization
- Deep Cleaning Services
- Decontamination Services
- Organic Waste Disposal & Transportation
- Routine Sanitization
- Safety & Compliance Training and Prevention

Teams across the country are available 24/7 to support the needs of your organization. **Call us to get started.**
